

Day 6 Functions

Data Science Internship - Python Week 1

What I Learned:

Learned how to create functions, pass arguments and return results. Functions help organize reusable code.

Practical Work:

I wrote and tested Python programs related to this topic. The code screenshot below shows my practice work.

Code Practice Screenshot:

Learning Outcome:

After completing this task, I improved my Python programming skills and understood how this concept is useful in Data Science projects.

A screenshot of a Visual Studio Code editor window with a dark theme. The title bar at the top reads "Visual StudioCode - Python". The editor contains the following Python code:

```
def add(a,b):  
    return a+b  
  
result = add(5,3)  
print(result)
```
